Methodology, TU Darmstadt

Didactics of Openness in Digital Humanities: A Self-Paced Online Course on Open Research with a Focus on Heritage Data

Dr Nadezhda Povroznik

Humanities Data Science and Methodology (HDSM)

Technical University of Darmstadt

Content

1. Why openness in the humanities requires adaptation
2. The curricular paradox: Motivation for the new course
3. A Self-paced course on Open Research in the Humanities
4. Heritage data as the central transferable case
5. Conclusions: From research norm to learning practice

1. Why openness in the humanities requires adaptation:

1.1 Open research and the Humanities

“Open science refers to both the practices and norms of more open and transparent communication and research in scientific disciplines and the discourse on these practices and norms.”

Knöchelmann, Marcel (2019) Open Science in the Humanities, or: Open Humanities?

- Open research as a set of practices and norms
- Open access, open data, open software, open publishing, and transparent workflows
- Open Humanities as a humanities-sensitive discourse
- The need to adapt openness to disciplinary research practices

1. Why openness in the humanities requires adaptation:

1.2 Specificity of Humanities Research

Hermeneutics	Source Criticism	Contexts and Contextual Meaning
Interpretation	Heterogeneous Resources as Data	Space for debate, disagreement, reinterpretation
Nuances	Subjectivity	...

2. The curricular paradox

“Transparency, scrutiny, critique and reproducibility to reinforce the rigor of scientific results, enhance the positive impact of science on society and increase society’s ability to solve complex interconnected problems.”

UNESCO Recommendation on Open Science

**Training Course: Open Access
in the Humanities**

Open Access in the Humanities

OpenLearn Create

Course

Open Research

Free course

**Digital humanities: humanities
research in the digital age**

3. A Self-paced course on Open Research in the Humanities

★ Open scholarship in History and the Humanities: Main readings on the state-of-the art - 02-04-0120-se
FB02 Gesellschafts- und Geschichtswissen...

★ Open Scholarship in History and the Humanities: Resources, Tools, and Methods for Research Implementation - 02-04-0130-ue
FB02 Gesellschafts- und Geschichtswissen...

Open Research in the Digital Humanities

Learning pathway

Introduction

Lesson 1: Open Research in Practice

Lesson 02 — Open Research Workflow

Lesson 03 — Open Data

Lesson 04 — Documenting AI

Lesson 05 — Data Analysis

Lesson 06 — Data Enhancement

Lesson 07 — Documentation and Reproducibility

Lesson 08 — Open Publishing

Course Wrap-up

* Dieses Projekt wurde durch das BMFTR-Verbundprojekt HERMES gefördert

4. Heritage data as the central transferable case

Heritage Data:

- constructed and interpretative (not neutral, real-world examples)
- connect the whole research workflow
- make abstract FAIR principles practical
- address ethical and legal questions
- connect technical skills with disciplinary expertise
- provide concrete examples for teaching open research
- allow critical engagement with openness
- support different levels of learner experience
- support transferable learning

5. Conclusions: From research norm to learning practice

- Open research as a set of learnable practices
- Open and reproducible scholarship can be integrated into teaching and learning
- Teaching open practices can support understanding of research practices and transferable skills
